

Test Sites and Software for Reviewing Open Source Web Application Vulnerability Scanners and Testing Platforms for Comprehensiveness in Detecting SQL Injection and Cross Site Scripting Vulnerabilities

Michael O'Connell

Purpose

The purpose of this document is to provide sources and additional relevant information for the test sites and software mentioned in the *Introduction* and *Design and Implementation* sections of the paper. I'm providing this document for more flexibility due to machine differences (everything I used is compiled for macOS) and because everything is Open Source, so if the test sites or software are needed one can simply just download them (or use a live version of them) from their respective sites.

Software/Tools

OWASP's Zed Attack Proxy (ZAP) - [OWASP ZAP](#)

Vega - <https://subgraph.com/vega/>

Test Sites

OWASP Juice Shop - <https://github.com/bkimminich/juice-shop#from-sources>

Altoro Mutual - <https://github.com/HCL-TECH-SOFTWARE/AltoroJ>

Hackazon - <https://github.com/rapid7/hackazon>
